Pizza Sales Performance Analysis Dashboard Report

1. Introduction

This report presents an analysis of pizza sales data using an interactive dashboard.
The objective is to identify key sales trends, customer behavior, and product performance.

2. Objectives

- Analyze overall sales performance
- Identify top and bottom selling pizzas
- Understand sales trends over time
- Support data-driven business decisions

3. Dataset Description

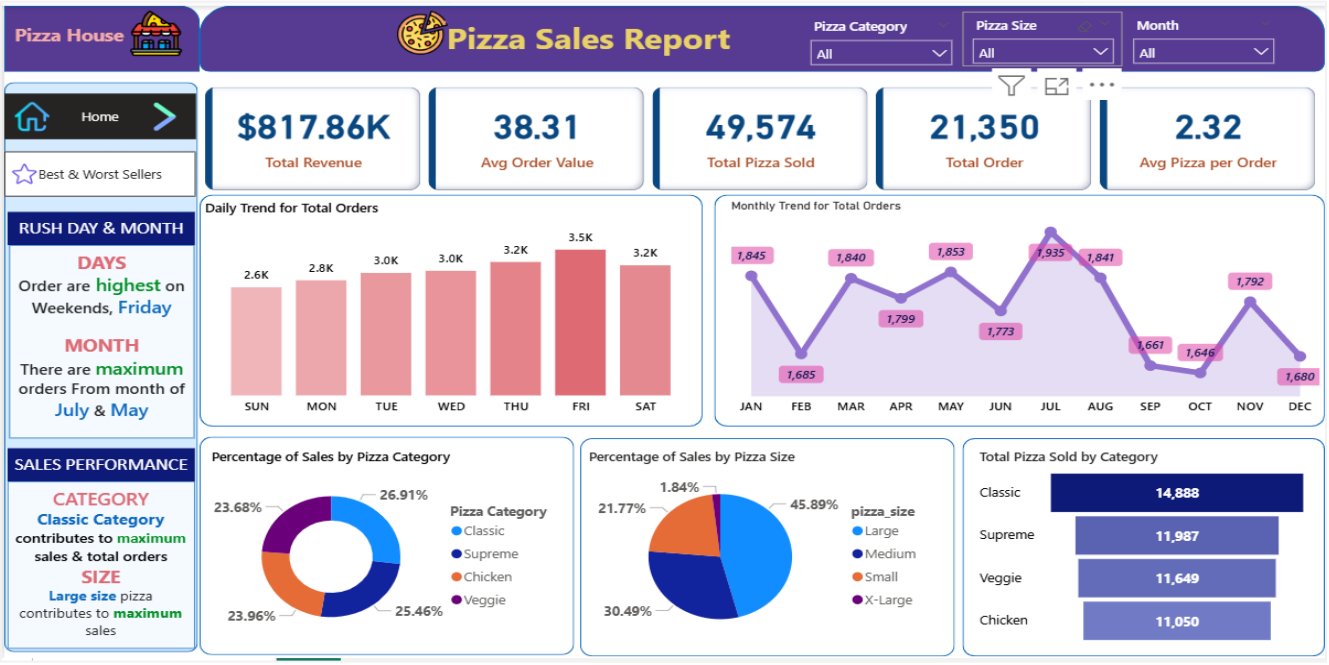
The dataset includes order details, pizza category, size, quantity sold, revenue, and date information.

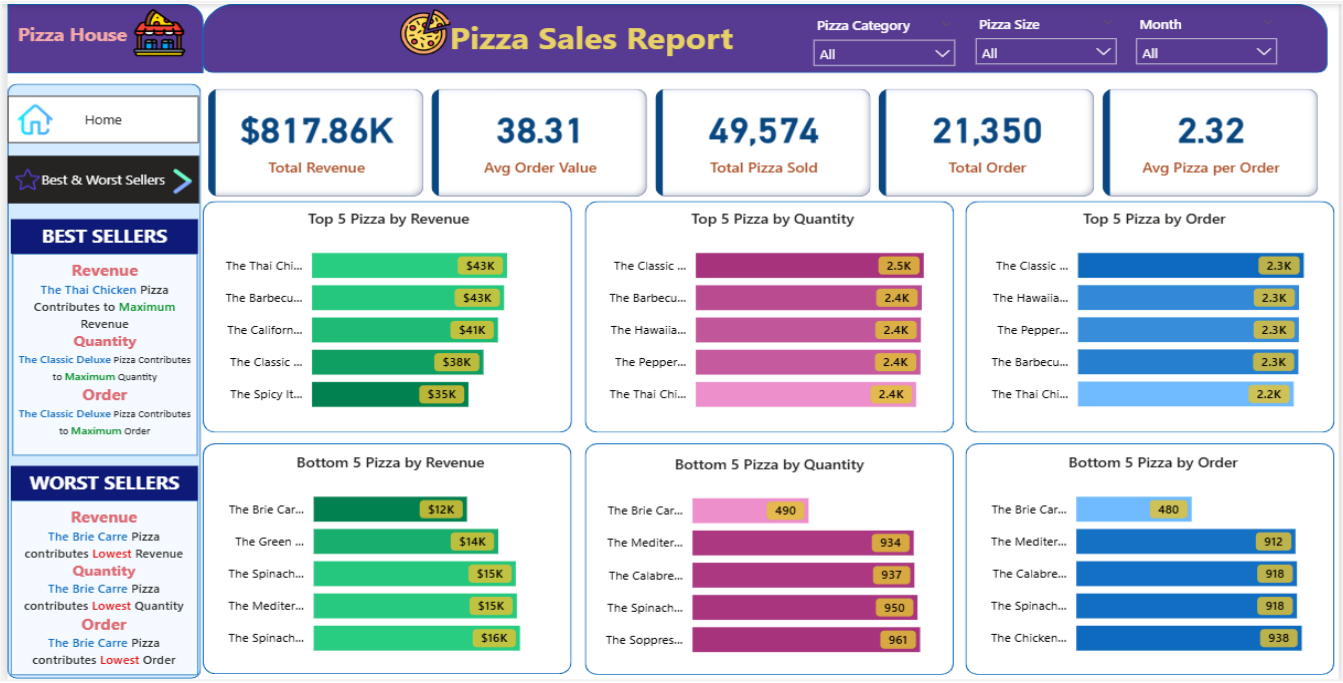
4. Tools & Technologies

- Power BI / Excel
- Data Cleaning
- Data Visualization

5. Dashboard Overview

- Total Revenue: $817K+
- Total Orders: 21,350
- Total Pizzas Sold: 49,574
- Average Order Value: 38.31
- Average Pizza per Order: 2.32





6. Key Findings

- Sales are highest on weekends, especially Friday
- July and May show peak sales performance
- Classic category contributes the most to revenue
- Large size pizzas generate the highest revenue
- Some pizzas consistently perform as top sellers while others underperform

7. Conclusion

The dashboard provides valuable insights into pizza sales performance.
These insights can help improve sales strategies and business growth.

8. Recommendations

- Focus on promoting high-performing pizzas
- Improve marketing during peak periods
- Optimize low-performing products
- Enhance inventory planning based on demand trends
